

WRITING PARALLEL LINE EQUATIONS

Parallel Lines has the same slope. The easiest formula to use is Point-slope

$y - y_1 = m(x - x_1)$ because it gives the slope m and a point on the line.

Directions: For #1-8, write the equation of a line that is parallel ($//$) to the given line and passes through the given point.

- ① $y = 4x + 1$ and the parallel line equation passes through $(5, 16)$.

$$m = \frac{4}{1}$$

$$m_{//} = \frac{4}{1}$$

$$y - y_1 = m(x - x_1)$$

$$y - 16 = 4(x - 5)$$

$$y - 16 = 4x - 20 \quad \boxed{y = 4x - 4}$$

- ③ $y = -2x + 3$ and the parallel line equation passes through $(18, -31)$.

$$m = \frac{-2}{1}$$

$$m_{//} = \frac{-2}{1}$$

$$y - y_1 = m(x - x_1)$$

$$y + 31 = -2(x - 18)$$

$$y + 31 = -2x + 36 \quad \boxed{y = -2x + 5}$$

- ⑤ $y = -\frac{2}{3}x + 1$ and the parallel line equation passes through $(-15, 6)$.

$$m = \frac{-2}{3}$$

$$m_{//} = \frac{-2}{3}$$

$$y - y_1 = m(x - x_1)$$

$$y - 6 = -\frac{2}{3}(x + 15)$$

$$y - 6 = -\frac{2}{3}x - 10 \quad \boxed{y = -\frac{2}{3}x - 4}$$

- ⑦ $y = -x - 5$ and the parallel line equation passes through $(-7, 10)$.

$$m = \frac{-1}{1}$$

$$m_{//} = \frac{-1}{1}$$

$$y - y_1 = m(x - x_1)$$

$$y - 10 = -1(x + 7)$$

$$y - 10 = -x - 7 \quad \boxed{y = -x + 3}$$

- ② $y = -\frac{1}{3}x - 2$ and the parallel line equation passes through $(12, -8)$.

$$m = \frac{-1}{3}$$

$$m_{//} = \frac{-1}{3}$$

$$y - y_1 = m(x - x_1)$$

$$y + 8 = -\frac{1}{3}(x - 12)$$

$$y + 8 = -\frac{1}{3}x + 4 \quad \boxed{y = -\frac{1}{3}x - 4}$$

- ④ $y = \frac{3}{5}x + 1$ and the parallel line equation passes through $(30, 24)$.

$$m = \frac{3}{5}$$

$$m_{//} = \frac{3}{5}$$

$$y - y_1 = m(x - x_1)$$

$$y - 24 = \frac{3}{5}(x - 30)$$

$$y - 24 = \frac{3}{5}x - 18 \quad \boxed{y = \frac{3}{5}x + 6}$$

- ⑥ $y = \frac{3}{7}x + 1$ and the parallel line equation passes through $(-35, -22)$.

$$m = \frac{3}{7}$$

$$m_{//} = \frac{3}{7}$$

$$y - y_1 = m(x - x_1)$$

$$y + 22 = \frac{3}{7}(x + 35)$$

$$y + 22 = \frac{3}{7}x + 15 \quad \boxed{y = \frac{3}{7}x - 7}$$

- ⑧ $y = 3x - 4$ and the parallel line equation passes through $(-6, -11)$.

$$m = \frac{3}{1}$$

$$m_{//} = \frac{3}{1}$$

$$y - y_1 = m(x - x_1)$$

$$y + 11 = 3(x + 6)$$

$$y + 11 = 3x + 18 \quad \boxed{y = 3x + 7}$$

PARALLELS OR NOT?*same slope = parallel*

Directions: For #1-9, find the slope of each line in simplest form. If the slopes are the same, then circle yes for PARALLEL (||). If not, then circle no.

Slope \overline{AB} = $\frac{1}{3}$ Slope \overline{CD} = $\frac{1}{3}$
 $\frac{1}{3} = \frac{1}{3}$ $\frac{1}{3} = \frac{1}{3}$
 Is $\overline{AB} \parallel \overline{CD}$? **Yes** or No

Slope \overline{EF} = $-\frac{1}{2}$ Slope \overline{GH} = $-\frac{2}{5}$
 $-\frac{2}{4} = -\frac{1}{2}$ $-\frac{2}{5} = -\frac{2}{5}$
 Is $\overline{EF} \parallel \overline{GH}$? **No**

Slope \overline{JK} = $\frac{1}{2}$ Slope \overline{LM} = $\frac{1}{2}$
 $\frac{2}{4} = \frac{1}{2}$ $\frac{2}{4} = \frac{1}{2}$
 Is $\overline{JK} \parallel \overline{LM}$? **Yes** or No

Slope \overline{NP} = $-\frac{2}{1}$ Slope \overline{QR} = $-\frac{2}{1}$
 $-\frac{4}{2} = -\frac{2}{1}$ $-\frac{6}{3} = -\frac{2}{1}$
 Is $\overline{NP} \parallel \overline{QR}$? **Yes** or No

Slope \overline{ST} = 2 Slope \overline{UV} = 4
 $\frac{4}{2} = 2$ $\frac{5}{1} = 5$
 Is $\overline{ST} \parallel \overline{UV}$? **No**

Slope \overline{SL} = -2 Slope \overline{CA} = -4
 $-\frac{6}{2} = -3$ $-\frac{4}{1} = -4$
 Is $\overline{SL} \parallel \overline{CA}$? **No**

Slope \overline{SF} = $\frac{1}{2}$ Slope \overline{GN} = $\frac{1}{2}$
 $\frac{3}{6} = \frac{1}{2}$ $\frac{3}{4} = \frac{3}{4}$
 Is $\overline{SF} \parallel \overline{GN}$? **Yes** or No

Slope \overline{AN} = $-\frac{5}{6}$ Slope \overline{GL} = $-\frac{5}{7}$
 $-\frac{5}{6} = -\frac{5}{6}$ $-\frac{5}{7} = -\frac{5}{7}$
 Is $\overline{AN} \parallel \overline{GL}$? **No**

Slope \overline{MN} = $\frac{3}{4}$ Slope \overline{TW} = $\frac{7}{8}$
 $\frac{3}{4} = \frac{3}{4}$ $\frac{7}{8} = \frac{7}{8}$
 Is $\overline{MN} \parallel \overline{TW}$? **No**
